

LillyPlayer for iOS / iPadOS / tvOS

The LillyPlayer video player allows you to play videos and music. All major video/audio formats are supported.

No need to convert your files, you can play all major video / audio formats directly on your device.

Play all, without conversion

With LillyPlayer, you can play most, if not all formats without wasting time converting or transcoding files. Video, Music, Podcasts, IPTV...

Hardware decoding is also supported, this guarantees you a fluid video in all circumstances.

Matching your content

LillyPlayer match your library, automatically downloads metadata / artwork, and classifies your library in an organized and searchable way.

Our database, which is constantly updated, allows a more and more efficient matching.

Stream from anywhere

Stream / Download your files from SMB / FTP / WEBDAV / UPnP access.

You can add files from a web interface and iTunes.

Watch anywhere

LillyPlayer support streaming audio/video over AirPlay and UPnP devices.

Easy to use

Easily control your video / audio, brightness, volume, choice of language, subtitles, navigation ... Everything from simple and intuitive gestures.

The TV anywhere

With the support of IPTV / Tvheadend, you can watch your TV channels everywhere. It also supports replay if your service offers it!

Be synced, even with others applications

iCloud synchronization allows you to synchronize your favorites, played/unplayed items, and the playback progress of your videos/podcasts. With Trakt.TV, you synchronize your readings/progressions with the LillyPlayer ecosystem, but also with other applications.

Enhance your experience

Take advantage of an equalizer to magnify your videos and music, multi-band with volume gain.

LillyPlayer is smart

Do you have a Bluetooth headset? LillyPlayer automatically adjusts the video delay to enjoy movies/series without audio lag.

More ? When you put LillyPlayer in background, the player automatically stop decoding the video, taking care of your battery.
